Decrease time, costs and risks of the quality control (QC) review process

- Get faster, more reliable QC of email thread coding with automated, AI-powered visualization of the entire email thread
- Realize substantial time and cost savings and better outcomes
- Quickly and reliably identify and remediate coding inconsistencies without resorting to inefficient, costly, and risky manual QC processes
- Reduce the risk of inadvertent production of privileged, confidential, or personal data

Scale high-volume BI at lightning speed

- Increase application value by exposing insights from exceptionally large data volumes with the embedded OpenText[™] Analytics Database (Vertica) analytical database
- Improve user satisfaction by seamlessly embedding metrics, interactive reports, dashboards, and self-service BI capabilities
- Get started immediately and cost-effectively with the highly scalable multi-tenant BI cloud service

opentext 🛚

Smarter analytics for any data anywhere with integration of data warehouse and data lake

- Understand your whole business by analyzing ALL data
- Go beyond BI. Predict the future with Machine Learning/AI
- Find data you need fast and keep up with data changes
- Control costs, stay green with efficient infrastructure usage

Smarter data analysis crossing the structured barrier

- Find deeper connections across your data with fewer restrictions on combining unstructured and structured data analysis.
- **Reveal valuable hidden data** with support for more crossstructural sources and formats in IDOL.
- **Power-up Extended ECM with IDOL**, giving users access to new types of content.

Unleash the full power of Gen Al for enterprise data search

- Experience the value of Generative AI, all while securing your data and identifying compliance risks, such as PII.
- Adopt the latest in LLM search capability including core vector database functionality to store and maintain accuracy on disparate data searches.
- Extract and enrich searches and discover valuable, often unknown information from all repositories and 1,900+ file formats.

Scale high-volume, cloud BI at lightning speed

- Scale your BI application to new heights by exposing insights from exceptionally large data volumes with the embedded Vertica analytical database
- Integrate with any application using SaaS APIs for seamlessly embedding metrics, interactive reports, dashboards, and self-service BI capabilities
- Get started immediately and cost-effectively with the highly scalable, multi-tenant BI cloud service

opentext*

Democratizing access to AI models including LLMs

- Beta version of new Document API single entry point to extract content and metadata using multiple models, libraries, and processes
- LLM for entity extraction backend service for refactoring of external model service to support multiple LLMs including T5 models for entity extraction and question and answer creation
- UI/UX enhancements Single interface for out-of-the-box models and externally linked LLMs, new view of sentiment analysis results in profile testing, and better grouping for text classification models

Improved automation and efficiency of analysis

- Improved automation support New REST API methods to execute analysis, get folder content, and export analysis making it easier to include in existing business processes.
- New transformation commands allow you to work with data sources, like creating indexes or table links, in the same user interface
- **Pattern based file loading** making it more efficient to ingest data based on patterns in the file name like sensor files with similar date/time stamps.

Access to more data faster

- **Read/Write BLOB storage** supports read/write operations from BLOB storage containers including HDFS and S3
- Bulk load from Parquet files a new Vertica driver to support the bulk load of data from Parquet files improving the speed and efficiency during the load process
- Web UI improvements continued improvements in the Magellan Integration Center web user interface.

Maximize data potential and fuel Al success with an efficient data lake

- Build, experiment, and innovate with technology that speaks your language, Python or SQL
- Get ready, set, go!– Your scalable data lakehouse just a few clicks away
- Be smart, get more for less; 50% fewer servers, lower TCO and lower carbon footprint

Scale high-volume, cloud-based analytics at lightning speed

- Scale your BI application to new heights by exposing insights from exceptionally large data volumes with the embedded Vertica analytical database
- Integrate with any application using SaaS APIs for seamlessly embedding metrics, interactive reports, dashboards, and self-service BI capabilities
- Get started immediately and cost-effectively with the highly scalable, multi-tenant BI cloud service

Unlock the business value in your data, not just find it

- Gain the answers in real time, not simply a list of locations and documents.
- Turn users into Data Analysts, demolish barriers: tech, training, data access
- Unlock the value within Microsoft 365, go beyond endless native searching

Unleash the power of your Vertica data

- Access and ingest data directly with your instance of Vertica
- **Blend**, transform and create new tables and fields
- **Explore** data insights with drag drop simplicity
- Analyze data with no special query skills or IT involvement
- **Visualize** business insights with pre-built algorithms, analysis, and smart visualizations
- Address ad-hoc business questions to reveal hidden relationships, patterns, profiles, and trends

opentext 🛚

Risk, Security and Compliance simplified

- Control and manage harmful, non-compliant and risky content
- **Simplify** your security and compliance requirements
- Powerful redirecting of information for users to control and distribute
- One single license for many powerful services

OpenText Intelligence Aviator: Your data's new best friend

- Get immediate insights through friendly conversational BI OpenText Aviator user interface
- Reduce bottleneck with no need for special skills to create reports and dashboards – Just Ask!
- Explore data quickly with suggested analysis and visualization based on the underlying data
- Increase application value with custom OpenText Intelligence Aviator based on your application data
- Address ad-hoc business questions with timeliness, precision, and trust

opentext

Unleash the power of OpenText Analytics Database data

- Access and ingest data directly with your instance of OpenText Analytics Database (Vertica)
- **Blend**, transform and create new tables and fields
- **Explore** data insights with drag drop simplicity
- Analyze data with no special query skills or IT involvement
- Visualize business insights with pre-built algorithms, analysis, and smart visualizations
- Address ad-hoc business questions to reveal hidden relationships, patterns, profiles, and trends.

Seamless Upgrades, Faster Performance and Smarter Data Management

- Perform upgrades with zero downtime
- Save time and effort with effortless PostgreSQL data integration and synchronization
- Increase query performance and efficiency with smarter, faster depot population
- Accelerate insights with powerful data exploration, cataloging, and analysis using Data Discovery

Smarter Scaling, Stronger Resilience, and Seamless Data Access

- **Optimize scaling** with Kubernetes auto-scaler for greater performance and flexibility
- Ensure disaster recovery and business continuity with in-database backup to other locations/cloud
- Gain deeper insights from Iceberg Metastore data
 using REST APIs
- Enjoy more efficient storage and processing with variable length data

opentext*

Effortless scalability, performance, and security in the cloud

- Navigate seamlessly with an improved UI for intuitive analysis
- Easily create, configure, schedule, and monitor data pipelines
- Save time and effort with **auto-scaling** based on CPU and memory thresholds.
- Strengthen security and **reduce unauthorized access** with CIDR configuration

Intelligent reporting with intuitive UI & GenAl-powered insights

- Modernize and enhance your report authoring experience with the improved and intuitive self-service, drag and drop interface
- Gain valuable insights and make smarter decisions with Generative Al-driven conversational queries in OpenText Intelligence Aviator. Effortlessly embed Aviator into any application using REST APIs.
