

OpenText Functional Testing

Accelerate functional testing for enterprise apps using embedded AI capabilities

Benefits

- **Leverage AI-powered intelligent test automation**
- **Increase test coverage** from the UI to the API
- **Test more per cycle in less time**
- **Eliminate bottlenecks** with an extensible DevOps ecosystem

With support for more than 200 technologies, including SAP®, Salesforce®, Java®, Citrix®, and more, Functional Testing One increases test coverage from the UI to the API—and everything in between—for true enterprise-grade application testing. QA and testing teams can efficiently scale tests across distributed infrastructures and in parallel on web and mobile. Organizations can script once and replay all tests with cross-browser support as well as leverage a broad ecosystem of integrations, from version control to continuous integration to agile management.

OpenText™ Functional Testing enables customers to test earlier and faster by combining a breadth of technology support with AI-driven capabilities to deliver the speed and resiliency required to achieve automation at scale that is tightly integrated with an organization’s current DevOps toolchain.

Feature	Description
True end-to-end testing from a single tool	Centralize and automate functional and regression testing across all layers of enterprise architectures, all designed to extend tests—from the UI to the API, including desktop, web, mobile, mainframe, composite, and packaged apps.
Cross-browser coverage	Script once and replay all tests seamlessly across the leading browsers and browser versions, including Chrome®, Firefox®, Safari®, Internet Explorer®, Edge®, and Chromium Edge®.
AI-driven test automation	Implement AI-based machine learning and OCR-enabled advanced object recognition combined with AI-based mockup identification, AI-based recording, AI-based text matching, remote AI testing, and image-based automation. Reduce test creation time and maintenance while boosting test coverage and resiliency of testing assets.
Comprehensive technology stack	Automate testing of more than 200 GUI and API technologies across mobile, web, desktop, and mainframe, including SAP, Salesforce, Java, and Citrix.
Parallel testing	Execute tests across distributed infrastructures and in parallel on web, mobile, API, Java, and Jenkins, or in a combination of API tests called by GUI tests and vice versa.
Integrated DevOps ecosystem	Leverage a DevOps-enabled toolchain for Continuous Testing features CI/CD integration with Jenkins®, Azure DevOps™, Bamboo®, and others, plus Version Control for Git™, Subversion®, TortoiseSVN™, and others.
API and web services testing	Create and execute tests on “headless” apps via an extensible framework.

Tests can be recorded on one browser and the same script can be used, with no adaptations, to test multiple browsers and configurations. If desired, the same test run can cover all the different browsers by having each test iteration executed on a different browser, with one report covering the test flow status on all desired configurations.

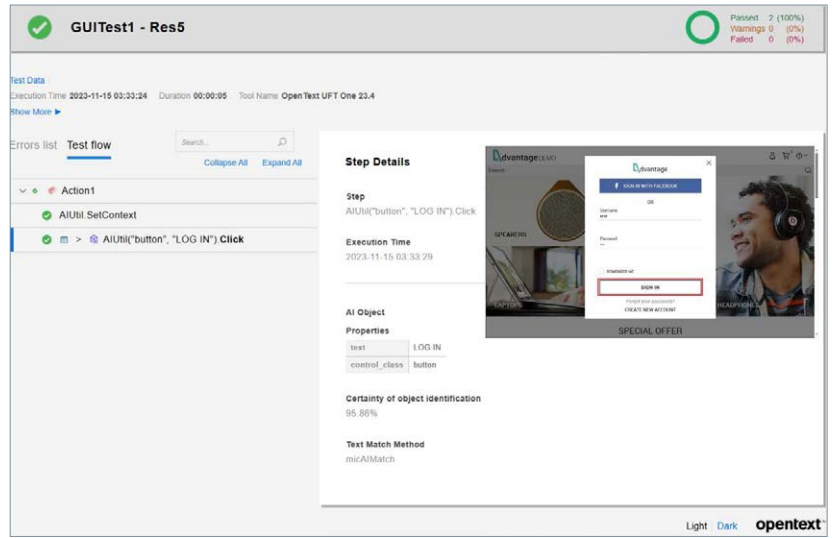

Script once and replay all tests with cross-browser support. Leverage a broad ecosystem of integrations including version control, continuous integration, and agile management.

AI object detection: Streamline test creation and execution by more naturally identifying objects, similar to how a human “sees” them.
